[LinkedIn](#) — [GitHub](#) — [LeetCode](#) — [CodeChef](#)

EDUCATION

Jaypee Institute of Information Technology (JIIT), Noida
B.Tech in Computer Science Engineering

2024 – 2028

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C++

Frameworks & Libraries: Next.js, React.js, FastAPI, Node.js, Express.js, Tailwind CSS, LangChain, LangGraph

Databases & Tools: PostgreSQL, MongoDB, MySQL, Docker, Git

PROJECTS

Synora — *Next.js, PostgreSQL, Gemini 2.5 Flash, LangChain, Vapi, Docker*

[GitHub](#)

- Built an autonomous B2B omnichannel AI platform enabling businesses to deploy RAG-powered agents for interactive text and voice customer support using Gemini 2.5 Flash and Vapi.
- Developed a multi-format knowledge engine with automated ingestion, 3072-dimensional embeddings via pgvector, and cosine similarity search to handle context-aware interactions.
- Architected a secure, scalable backend leveraging PostgreSQL (Neon) to handle robust team management, enterprise integrations, and data isolation.
- Implemented automated AI analytics and webhook processing to generate real-time post-conversation summaries and usage tracking on a custom Next.js admin dashboard.

Career Pilot AI — *FastAPI, React, LangGraph, LLMs, Docker*

[GitHub](#)

- Architected a multi-agent orchestration pipeline using LangGraph and FastAPI to autonomously analyze resumes, score candidate profiles, and deliver personalized job recommendations.
- Engineered a Retrieval-Augmented Generation (RAG) system for semantic job matching, leveraging advanced embeddings and vector search to maximize recommendation accuracy.
- Designed and containerized scalable, modular agent workflows with Docker, automating complex logic for resume rewriting, dynamic ranking, and targeted job extraction.

RideMates — *MongoDB, Express, React, Node.js, Socket.io*

[GitHub](#)

- Developed a comprehensive full-stack ride-sharing application with Node.js and Express, facilitating dynamic ride creation, intelligent user matching, and real-time seat management.
- Implemented secure, bidirectional communication using Socket.io for live user chat, fortified by JWT-based authentication and strict access control protocols.
- Crafted highly responsive, modern user interfaces and intuitive dashboards using React.js and Tailwind CSS to ensure a seamless cross-device experience.

POSITIONS OF RESPONSIBILITY

Technical Volunteer, AI/ML Hub, JIIT

2025 – Present

- Assisted in machine learning workshops and mentored junior students in foundational AI concepts.
- Helped organize technical events, hands-on coding sessions, and community learning initiatives.

ACHIEVEMENTS

- Solved 400+ Data Structures and Algorithms problems on LeetCode.
- Achieved a 3 Star rating on CodeChef.
- Built multiple end-to-end full-stack and AI applications.
